

Practice to be assessed and included in the Guidelines

**Number/code:** OM/E5

**Title:** WASTE MANAGEMENT GUIDE

**Guidelines section:**

<input type="checkbox"/>	Governance	<input checked="" type="checkbox"/>	Operational management		
		<input type="checkbox"/>	<i>Context of the event</i>	<input type="checkbox"/>	<i>Procurement</i>
		<input checked="" type="checkbox"/>	<i>Event</i>	<input type="checkbox"/>	<i>Mobility and logistics</i>
		<input type="checkbox"/>	<i>Stadium management</i>	<input type="checkbox"/>	

**Description:**

In order to set up an efficient waste management collection system, it is necessary to engage different actors like event organiser, Venues and Stadium authorities, Sites Owners and Host cities, Hospitality services and licensed souvenir providers, commercial partners, concessions stand operators, Cleaning Service providers, Waste Management operators, hotels, sponsors, other partners and organisations etc.

In addition, ad hoc training to waste and cleaning service provider’s staff and to all the persons that will work on the event sites and somehow will produce waste is needed.

A good practice is the development of short operative waste management guides aimed at explaining how the waste has to be managed (fractions to separate waste in with clear lists of which materials and object can go into a specific waste fraction), which are the collection procedures and the equipment to use (different types of bins, bags, temporary waste storage points etc.). These guides have to be distributed among all the subjects that are going to work on the event sites in duly time: they must have time to understand the procedures, ask for help in managing particular situation, familiarize with terms and equipment.

**Environmental benefits:**

No direct environmental benefits, however a good guide is strategic for ensuring an efficient waste management during the event.

**Economic benefits:**

Prevention of waste disposal costs, possible earns from the selling of some recovered materials.

**Applicability and replicability potential**

Waste management guide can be prepared for every stadium.
